

DENTAL PROBLEMS

Dental problems have been reported with oral medicines containing buprenorphine (Suboxone/Subutex) including:

- cavities
- tooth decay
- loss of teeth
- oral infections

RECOMMENDATIONS:

1. Continue taking your buprenorphine medicine as prescribed.
2. After the medicine is completely dissolved, take a large sip of water, swish it gently around your teeth and gums, and swallow.
3. Wait at least 1 hour before brushing your teeth to avoid damage to your teeth and give your mouth a chance to return to its natural state.
4. Schedule a dentist visit soon after starting this medicine.
